

# **PYTHON FILE HANDLING & AUTOMATION**

**Submitted By:**

Faiyaz Sayyed

## **Internship Task 1**

Date: **10-06-2026**

### **1. Objective**

The objective of this project is to understand Python file handling, automation of file operations, and exception handling.

This project demonstrates:

- Reading and writing text files
- Reading and writing CSV files
- Renaming files
- Moving files
- Deleting files
- Error handling using try-except

### **2. Tools Used**

- Python 3.13
- Visual Studio Code (VS Code)
- Windows Operating System

### 3. Code

#### Source code:

```
import os
import shutil
import csv

# Create text file
with open("data.txt", "w") as file:
    file.write("Hello Internship")

# Read file
with open("data.txt", "r") as file:
    print(file.read())

# Create CSV file
with open("students.csv", "w", newline="") as file:
    writer = csv.writer(file)
    writer.writerow(["Name", "Age"])
    writer.writerow(["Faiyaz", 18])

# Create backup folder
os.makedirs("backup", exist_ok=True)

# Rename file
os.rename("data.txt", "new_data.txt")

# Move file
shutil.move("new_data.txt", "backup/new_data.txt")

print("Task completed successfully")
```

## 4. Output Screenshots

### Writing data to text file

(Text file was created and data was written. )

The screenshot displays a code editor interface with a dark theme. On the left, the 'EXPLORER' sidebar shows a file tree with 'TASK1\_FILE...' at the root, containing 'backup', 'data.txt', 'main.py', and 'students.csv'. The 'main.py' file is selected. The main editor area shows the following Python code:

```
1 with open("data.txt", "w") as file:
2     file.write("Hello Internship\n")
3     file.write("Learning Python")
4
5 print("Data written successfully")
```

Below the code editor, the 'TERMINAL' tab is active, showing the command prompt output:

```
PS C:\Users\Mohammed\OneDrive\PYTHON WORLD\Task1_File_Handling> & C:
:\Users\Mohammed\AppData\Local\Programs\Python\Python313\python.exe "
c:/Users/Mohammed/OneDrive/PYTHON WORLD/Task1_File_Handling/main.py"

Data written successfully
PS C:\Users\Mohammed\OneDrive\PYTHON WORLD\Task1_File_Handling> |
```

## Reading text file

(Data was read from the file. )

```
main.py > ...
1 with open("data.txt", "r") as file:
2     content = file.read()
3
4 print(content)|
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS Python: main + - [ ] [ ] ... [ ] [ ] [ ] [ ]

```
PS C:\Users\Mohammed\OneDrive\PYTHON WORLD\Task1_File_Handling> & C:\Users\Mohammed\AppData\Local\Programs\Python\Python313\python.exe "c:/Users/Mohammed/OneDrive/PYTHON WORLD/Task1_File_Handling/main.py"

Hello Internship WORLD
Learning Python
MY NAME IS SAYYED FAIYAZ
I NEED INTERSHIP AT YOUR COMPANY
PS C:\Users\Mohammed\OneDrive\PYTHON WORLD\Task1_File_Handling> 
```

## Creating CSV file

(CSV file was created and populated. )

The screenshot shows a code editor with a file explorer on the left and a code editor on the right. The file explorer shows a folder named 'TASK1\_FILE\_HANDLING' containing files 'backup', 'data.txt', 'main.py', and 'students.csv'. The code editor shows the following Python code in 'main.py':

```
1 import csv
2
3 with open("students.csv", "w", newline="") as file:
4     writer = csv.writer(file)
5
6     writer.writerow(["Name", "Age"])
7     writer.writerow(["Faiyaz", 18])
8
9 print("CSV created")
10
```

Below the code editor is a terminal window showing the execution of the script. The terminal output is as follows:

```
PS C:\Users\Mohammed\OneDrive\PYTHON WORLD\Task1_File_Handling> & C:
\Users\Mohammed\AppData\Local\Programs\Python\Python313\python.exe "
c:/Users/Mohammed/OneDrive/PYTHON WORLD/Task1_File_Handling/main.py"

CSV created
PS C:\Users\Mohammed\OneDrive\PYTHON WORLD\Task1_File_Handling> & C:
\Users\Mohammed\AppData\Local\Programs\Python\Python313\python.exe "
c:/Users/Mohammed/OneDrive/PYTHON WORLD/Task1_File_Handling/main.py"

CSV created
PS C:\Users\Mohammed\OneDrive\PYTHON WORLD\Task1_File_Handling>
```

```
PS C:\Users\Mohammed\OneDrive\PYTHON WORLD\Task1_File_Handling> python main.py
CSV created
```

The screenshot shows a text editor with the following content:

```
students.csv > data
1 Name, Age
2 Faiyaz, 18
3
```

## Renaming file

(File was renamed successfully. )

Before change:

After change:

## Moving file to backup folder

(File was moved into backup folder. )

## Exception handling output

(Exception handling was used to manage errors. )

The screenshot shows a Python IDE with a file explorer on the left, a code editor in the center, and a terminal at the bottom. The file explorer shows a project named 'TASK1\_FILE\_HANDLING' with a subfolder 'backup' containing 'main.py' and 'students.csv'. The code editor shows the following Python code:

```
1 try:
2     with open("abc.txt", "r") as file:
3         print(file.read())
4
5 except FileNotFoundError:
6     print("File not found")
```

The terminal shows the command to run the script and the output:

```
PS C:\Users\Mohammed\OneDrive\PYTHON WORLD\Task1_File_Handling> & C:
\Users\Mohammed\AppData\Local\Programs\Python\Python313\python.exe "
c:/Users/Mohammed/OneDrive/PYTHON WORLD/Task1_File_Handling/main.py"

File not found
PS C:\Users\Mohammed\OneDrive\PYTHON WORLD\Task1_File_Handling>
```

## **6. Conclusion**

This project helped me understand Python file handling, automation of file operations, and exception handling.

I learned how to create, read, rename, move, and manage files using Python.
